

# Hawthorne Midwives *embrace beginnings*

ANNUAL REPORT  
JULY 2018 - JULY 2019

---

## **134 Clients**

50% having their first baby  
50% having subsequent babies

**27% of our clients** did not have OHIP at  
some point in the pregnancy  
**15%** did not have OHIP at delivery

In our first quarter **50%** did not have  
OHIP, with **36%** non-OHIP at delivery.  
This has decreased significantly, with  
only **12%** non-OHIP in our last quarter  
and **5%** non-OHIP at delivery.

**90% of clients  
delivered at  
hospital (82%  
planned)**

**10% of clients had  
a home birth (18%  
planned)**

28%  
used an epidural

71%  
had a  
successful  
VBAC

52%  
chose an early  
discharge  
(of those eligible for early  
discharge)

## BREASTFEEDING

At the time of birth, about 95% of clients are breastfeeding their babies. At the time of discharge from hospital (excluding early discharge from hospital and homebirths), 73% of clients are exclusively breastfeeding, and 26% are combination feeding (breastmilk and formula), largely because of SGA and LGA babies. At 6 weeks postpartum, 72.5% of clients are exclusively breastfeeding, 27% of clients are combination feeding (breastmilk and formula) and only 1.5% of clients are exclusively formula feeding. This means at 6 weeks postpartum, 98.5% of babies in care at Hawthorne Midwives are having at least some breastmilk.
